Hiring Manager / Recruitment Team

Dear Hiring Manager,

I'm reaching out with genuine excitement about the opportunity to bring my skills in software development, data science, and creative design to your team. My name is Joshua Victor, I go by Josh and I'm a Lagos-based technology professional with over three years of hands-on experience building products that solve real problems for real people. I'm also the founder of **GuruLabs**, an innovation studio where I've channeled my passion for technology into shipping digital products, serving clients across diverse industries, and building the kind of work ethic that only comes from doing everything yourself from the ground up.

What sets me apart is not just what I know, it's the range of what I can do and how I connect the dots between disciplines. I architect responsive, high performance web applications using **React, Next.js, and vanilla JavaScript**. I analyze data, build predictive models, and extract insights using **Python, SPSS, and statistical frameworks**. I design intuitive, beautiful user experiences in **Corel and the Adobe Creative Suite**. And I do all of this while simultaneously running a startup, pursuing a degree in Statistics, and actively building two products that I believe have the potential to change how Africans interact with money and education.

Two of those products reflect my thinking most clearly. **KudiFlow** is a smart financial management platform I'm building for the African market integrating AI powered expense categorization, local payment APIs, and a clean, accessible interface designed for everyday users. **ScholarLens** is a predictive academic analytics system for Nigerian universities, powered by Multivariate Linear Regression models that forecast student performance with 85%+ accuracy and generate personalized recommendations. Both products represent my ability to go from idea to architecture to deployed product independently, resourcefully, and with a high standard of quality.

I'm not looking for just any role, I'm looking for the right one. I thrive in environments where ambiguity is treated as an opportunity, where shipping matters more than perfection for its own sake, and where multidisciplinary thinkers are valued. Whether it's a fast moving startup, a remote engineering team, a data science internship, or a tech fellowship I bring intensity, adaptability, and a builder's mindset to every situation.

I'd love the opportunity to talk to share more about what I'm building, what I've built, and how I could contribute meaningfully to your team. My portfolio is at josh-d-guru.vercel.app, and I'm available for a call at short notice. Thank you genuinely for your time and consideration.

With respect and enthusiasm,

Idowu Joshua Victor
